Dear Hiring Manager,

I am currently a Computer Science student of University of Houston looking for a position for to start my career to build up my software experience to the next level. Ok, I will make this short and simple so you do not have to struggle to skim though this cover letter and get bored easily. As the sotware industry continues to evolve over the years and catching up to today's techonlogy, I want to stand myself to evolve and progress my programming skills to the professional world before graduation. Additionally, I independently learned programming in Java and C++ and properly build and fix PC components as a technical hobby to exercise in my free-time. This gives me a flexible skill to inquire in order to establish a broader and yet a redeemable skill that can help me in a long run.

Over the past seven months, I learned how to get into my first job learning how to satisfy customers and working with co-worker who has a different point of view to handle the work environment when it needs to be done. Working enhances my communication skills and social benefits that co-workers and customers' needs by day and night shift. What can make a successful person success is not only the experience provided, but the strong and impactful communication skills that can relate to the co-workers and the employer as well. Along with communication skills I've learned while working there, I hope that I can contribute to your workplace efficiently. I will call you as soon an interview date can be assured as possible. In the meanwhile, you can contact me any time at (281) 857-1351. I hope to be the best possible candidate for this position at your company.
